Use of reference rates, the Markets Data API, and all data accessible through the Markets Data API is subject to the Terms of Use for the Federal Reserve Bank of New York website.

Reference rates, including the Effective Fed Funds Rate (EFFR), Overnight Bank Funding Rate (OBFR), Treasury Repo Benchmark Rates, and SOFR Averages and Index (SOFR-avg-ind) are subject to important disclaimers, conditions, limitations, and indemnification obligations described in the Terms of Use.
Introduction

The Markets Data APIs are provided to external users and applications so that they may request data from the Federal Reserve Bank of New York. The APIs are architected using either a SOAP or a RESTful interface, with structured semantic URLs. As these APIs are intended to be consumed by a variety of systems, the data they return are in multiple formats. This document will outline how to retrieve data in various formats for the data set listed below.

APIs Covered

- System Open Market Account Holdings (SOMA)
- Primary Dealer Statistics (PD)
- Desk Operations
  - Treasury Securities (TSY)
  - Agency Mortgage-Backed Securities (AMBS)
  - Repo
  - Reverse Repo
  - Securities Lending
  - Central Bank Liquidity Swap
- Reference Rates
  - Effective Federal Funds Rate (EFFR)
  - Overnight Bank Funding Rate (OBFR)
  - Treasury Repo Rates
    - Broad General Collateral Rate (BGCR)
    - Tri-Party General Collateral Rate (TGCR)
    - Secured Overnight Financing Rate (SOFR)
      - SOFR Averages & Index (SOFRAI)
- Other Rates
  - Term Securities Lending Facility (TSLF)
  - Commercial Paper Funding Facility (CPFF)
  - Foreign Exchange Rates (Fx Rates)
What’s New in this Version

- Replacement of all TOMO (Repo and Reverse Repo) Methods
- Added new Repo and Reverse Repo Methods

Support Notification

Repo and Reverse Repo (TOMOs) SOAP APIs Replacement
Repo and Reverse Repo APIs are replaced. Previously existing APIs are no longer supported. The “retrieve” methods are replaced by “search” and “retrieveLastN” replaced by “last/n”. A “latest” and “lastTwoWeeks” is also available.

Central Bank FX Liquidity Swap API and Trade file Replacement
All existing APIs for FX Liquidity Swap are replaced. The existing APIs are no longer supported. The “retrieveAll” API and trade files are replaced by “last/n”, “latest”, and “search” APIs. See usage detail in the Central Bank FX Liquidity Swap Methods in this document.

The Outstanding amounts will no longer be provided.

Reference Rate APIs Replacement
APIs for reference rates are replaced. Previously existing APIs are no longer supported. The “retrieve” methods are replaced by “search” and “retrieveLastN” replaced by “last/n”. A “latest” option is also available.

- Unsecured Rates (EFFR, OBFR)
- Secured Rates (TGCR, BGCR, SOFR, SOFRAI)

RSS Feeds Support Ending
Support of RSS Feed will end for all APIs listed in this document. Reference rates RSS feeds are disabled. Dates for others will be in future updates.

As alternative, subscribe to respective govdelivery emails and/or make use of the APIs detailed in this document. GovDelivery sign-ups are available on each webpage.

Sample API replacement for each product can be found in the “RSS Feeds” section in this document.

SDMX.xml Format Deprecation
Please take note that sdmx.xml for APIs and downloads is now deprecated and will gradually be retired. Support for csv, xlsx, xml and json formats will continue. For APIs and downloads that currently support sdmx.xml but does not support xml format, xml will be added as an option.

End of Support (April 2021)
Support of sdmx.xml format will end for the following methods and webpage downloads

- AMBS operation
- Treasury operation
Versioning & Release

REST:
The RESTful APIs will be versioned with numeric values consisting of three integers representing major, minor and release numbers in the form of Major.Minor.Release. Each change of the numbers will be in increments of one, with the lesser significant numbers resetting to zero at changes in major and minor numbers. Details on the significance and meaning of changes in each number are detailed below.

Example
- Major Version: 1.8.6
- Minor Version: 1.9.0
- Release Version: 1.9.1

SOAP:
The SOAP APIs are versioned with numeric values in the URL. The first number is the major release number and the second number is the minor release number.

Example
- Major Version: https://www.newyorkfed.org/markets/.../webservice/v3_8/...
- Minor Version: https://www.newyorkfed.org/markets/.../webservice/v4_0/...

Releases:
These are the significance and meaning of changes to APIs as they relate to versioning in each number.

Changes in Release numbers
- Will maintain backward compatibility
- Should consist of bug fixes to be consistent with the published specification
- Will not contain additions or changes to the API
- Will not necessarily coincide with a new API specification

Changes in Minor numbers
- Will maintain backward compatibility
- May include bug fixes
- May include additions or changes to the API such as additional functionality, parameters or fields data while maintaining backward compatibility
- Will be released with a new API specification

Changes in Major numbers
- Does not maintain backward compatibility
- May include bug fixes
• Will include additions or changes to the API such as additional or changes to functionality, parameters or fields data that will not maintain backward compatibility
• Will be released with a new API specification

Locations

REST:
The APIs are available via HTTPS. The base URLs of the APIs varies per data set.

API Base URL: https://markets.newyorkfed.org/api/
This base applies to the following data sets:
• AMBS Operations
• Treasury Operations
• Repo and Reverse Repo Operations
• Primary Dealer Statistics
• SOMA
• Reference Rate
• Central Bank FX Liquidity Swap

Example
❖ https://markets.newyorkfed.org/api/soma/mbs/get/release_log.xml

API Base URL: https://websvcgatewayx2.frbny.org/
This base applies to the following data sets:
• SecLending

Example
❖ https://websvcgatewayx2.frbny.org/autorates_securitieslending_external/services/v1_0/securitieslending/retrieveXmlLastN?n=3

SOAP:
WSDL for SOAP APIs

Securities Lending
▪ https://www.newyorkfed.org/markets/seclend/webservice/v3_0/securitiesLendingWS.wsdl

TSLF
▪ https://www.newyorkfed.org/markets/tslf/webservice/v3_0/TSLFWS.wsdl

CPFF
▪ https://www.newyorkfed.org/markets/cpf/webservice/v3_0/CPFFWS.wsdl

FX-Rates
▪ https://www.newyorkfed.org/markets/fxrates/WebService/v1_0/FXWS.wsdl
Parameters

REST:
Each method of the APIs may be offered in multiple formats. The formats are specified by the file extension on the method’s URL. Parameters to the API are sent via query string parameters in the standardized form. Here are some basic guidelines:

• Each parameter is sent in a name-value pair
• The name and value should be separated by an equals (=) sign
  • This may be omitted if the value is blank
• Each set of name value pairs should be separated by an ampersand (&)

Example
  \[
  .../search.json?startDate=10/21/2020&endDate=10/22/2020&cusip=912810FT0
  \]

In some cases the API may specify required parameters to the method as part of the path. In these cases, you may replace the placeholder with the respective value as noted.

Example
  \[
  \text{soma/agency/get/mbs/asof/[DATE].[FORMAT]}
  \]
  \[
  \text{soma/agency/get/mbs/asof/2020-10-21.xml}
  \]

SOAP:
Each method of the API uses SOAP for both the request and response.

Parameters to the APIs are sent using standard xml. As with any qualified xml the namespaces of the data set you are calling must be used for each request.

Example
  \[
  \text{https://websvcgatewayx2.frbny.org/autorates_securitieslending_external/services/v1_0/securitieslending/retrieveXmlLastN?n=3}
  \]

Additional parameters may or may not be required according to the method’s specification in this document.
Response

REST:
The standard HTTP response codes will be used to handle high-level error conditions from the API. A 200 response will be the normal case. If the requested item is not found, a 404 respond will be returned.

SOAP:
A client can either get the SOAP response intended or a SOAP fault if there is an error. A typical SOAP response will be a String. The String will contain a complete XML document detailing the result.

Beta Versions
The default endpoints are backed by the latest official service implementation. When upgrades or new features are implemented, they will first be made available in beta version so that consumers may test their systems against it before it goes live. After a period of time, the beta version will replace the latest version.

To access a service beta version, preface the path with the /beta node and the request will be serviced by the beta version. So a call of:

https://markets.newyorkfed.org/api/ambs/all/results/details/latest.json

Can be executed as:

https://markets.newyorkfed.org/beta/api/ambs/all/results/details/latest.json

Not all endpoints support beta versions. The documentation will indicate where it is offered.

Authentication
No authentication is required for access to the Markets Operations API at this time.
