SOAP:
Introduction

The Markets Data APIs are provided to external users and applications so that they may request data from the Federal Reserve Bank of New York. The APIs are architected using either a SOAP or a RESTful interface, with structured semantic URLs. As these APIs are intended to be consumed by a variety of systems, the data they return are in multiple formats. This document will outline how to retrieve data in various formats for the data set listed below.

APIs Covered

- System Open Market Account Holdings (SOMA)
- Primary Dealer Statistics
- Desk Operations
  - Treasury Securities
  - Agency Mortgage-Backed Securities
  - Temporary Open Market Operations (TOMO)
    - Repo
    - Reverse Repo
  - Securities Lending
- Reference Rates
  - Effective Federal Funds Rate (EFFR)
  - Overnight Bank Funding Rate (OBFR)
  - Treasury Repo Rates
    - Broad General Collateral Rate (BGCR)
    - Tri-Party General Collateral Rate (TGCR)
    - Secured Overnight Financing Rate (SOFR)
      - SOFR Averages & Index
- Other Rates
  - Term Securities Lending Facility (TSLF)
  - Commercial Paper Funding Facility (CPFF)
  - Foreign Exchange Rates (Fx Rates)
What’s New in this Version

- Added new types of Operations for AMBS Methods
  - roll - for the inclusion of Dollar Roll operations
  - swap - for the inclusion of Coupon Swap operations
- Added xml format for Treasury Methods
- Format support notifications

Support Notification

SDMX.xml Format Depreciation
Please take note that sdmx.xml for APIs and downloads is now deprecated and will gradually be retired. Support for csv, xlsx, xml and json formats will continue. For APIs and downloads that currently support sdmx.xml but does not support xml format, xml will be added as an option.

End of Support (Targeted for April 2021)
Support of sdmx.xml format will end for the following methods and webpage downloads
  - AMBS operation
  - Treasury operation
  - Primary Dealer Survey
  - Reference Rates

Additional notification will be sent in advance and the beta environment will be made available for testing.
Versioning & Release

REST:
The RESTful APIs will be versioned with numeric values consisting of three integers representing major, minor and release numbers in the form of Major.Minor.Release. Each change of the numbers will be in increments of one, with the lesser significant numbers resetting to zero at changes in major and minor numbers. Details on the significance and meaning of changes in each number are detailed below.

Example
- Major Version: 1.8.6
- Minor Version: 1.9.0
- Release Version: 1.9.1

SOAP:
The SOAP APIs are versioned with numeric values in the URL. The first number is the major release number and the second number is the minor release number.

Example
- Major Version: http://www.newyorkfed.org/markets/.../webservice/v3_8/...
- Minor Version: http://www.newyorkfed.org/markets/.../webservice/v4_0/...

Releases:
These are the significance and meaning of changes to APIs as they relate to versioning in each number.

Changes in Release numbers
- Will maintain backward compatibility
- Should consist of bug fixes to be consistent with the published specification
- Will not contain additions or changes to the API
- Will not necessarily coincide with a new API specification

Changes in Minor numbers
- Will maintain backward compatibility
- May include bug fixes
- May include additions or changes to the API such as additional functionality, parameters or fields data while maintaining backward compatibility
- Will be released with a new API specification

Changes in Major numbers
- Does not maintain backward compatibility
- May include bug fixes
- Will include additions or changes to the API such as additional or changes to functionality, parameters or fields data that will not maintain backward compatibility
- Will be released with a new API specification
Locations

REST:
The APIs are available via HTTP. The base URLs of the APIs varies per data set.

API Base URL:  http://markets.newyorkfed.org/api/
This base applies to the following data sets:
- SOMA
- Primary Dealer Statistics
- AMBS Operations
- Treasury Operations

Example
- http://markets.newyorkfed.org/api/soma/mbs/get/release_log.xml

API Base URL: https://websvcgatewayx2.frbny.org/
This base applies to the following data sets:
- Reference Rates
- TOMO
- SecLending

Example
- https://websvcgatewayx2.frbny.org/autorates_fedfunds_external/services/v1_0/fedfunds/excel/retrieveLastN?n=25
- https://websvcgatewayx2.frbny.org/sofr-avg-ind_external_httponly/services/v1_0/sofr-avg-ind/excel/retrieveLastN?n=25&rateType=R1

SOAP:
WSDL for SOAP APIs
- Repo and Reverse Repo Operations
  - http://www.newyorkfed.org/markets/omo/dmm/tomo/webservice/v3_0/tomoWS.wsdl

- Securities Lending
  - http://www.newyorkfed.org/markets/seclend/webservice/v3_0/securitiesLendingWS.wsdl

- TSLF
  - http://www.newyorkfed.org/markets/tslf/webservice/v3_0/TSLFWS.wsdl

- CPFF
  - http://www.newyorkfed.org/markets/cpff/webservice/v3_0/CPFFWS.wsdl

- FX-Rates
  - http://www.newyorkfed.org/markets/fxrates/WebService/v1_0/FXWS.wsdl
Parameters

REST:
Each method of the APIs may be offered in multiple formats. The formats are specified by the file extension on the method’s URL. Parameters to the API are sent via query string parameters in the standardized form. Here are some basic guidelines:

- Each parameter is sent in a name-value pair
- The name and value should be separated by an equals (=) sign
  - This may be omitted if the value is blank
- Each set of name value pairs should be separated by an ampersand (&)

Example

- ../search.json? startdate=10/21/2020&enddate=10/22/2020&cusip=912810FT0

In some cases the API may specify required parameters to the method as part of the path. In these cases, you may replace the placeholder with the respective value as noted.

Example

- soma/mbs/get/asof/[DATE],[FORMAT]
- soma/mbs/get/asof/2020-10-21.xml

SOAP:
Each method of the API uses SOAP for both the request and response.

Parameters to the APIs are sent using standard xml. As with any qualified xml the namespaces of the data set you are calling must be used for each request.

Example

- https://websvcgatewayx2.frbny.org/autorates_tomo_external/services/v1_0/tomo/retrieveXmlLastN?n=25

Additional parameters may or may not be required according to the method’s specification in this document.
Response

REST:
The standard HTTP response codes will be used to handle high-level error conditions from the API. A 200 response will be the normal case. If the requested item is not found, a 404 respond will be returned.

SOAP:
A client can either get the SOAP response intended or a SOAP fault if there is an error. A typical SOAP response will be a String. The String will contain a complete XML document detailing the result.

CSV and Excel Formats
The CSV and Excel formats each start with a header row defining the columns of the data. Subsequent rows contain the data respective to the column headings.

Beta Versions
The default endpoints are backed by the latest official service implementation. When upgrades or new features are implemented, they will first be made available in beta version so that consumers may test their systems against it before it goes live. After a period of time, the beta version will replace the latest version.

To access a service beta version, preface the path with the /beta node and the request will be serviced by the beta version. So a call of:

http://markets.newyorkfed.org/api/ambs/all/results/details/latest.json

Can be executed as:

http://markets.newyorkfed.org/beta/api/ambs/all/results/details/latest.json

Not all endpoints support beta versions. The documentation will indicate where it is offered.

Authentication
No authentication is required for access to the Markets Operations API at this time.
